Minor Technology to Innovate

Programmabeschrijving

This minor is offered in semester 1 (starting September)
Translating existing scientific possibilities into new technologies, products or businesses. In this programme you work, together with students from different disciplines, on new creative ideas in the field of product design and intelligent sensors. In a research environment you will design and create a new and useful service or product, or improve an existing concept. This programme is based in Assen, just south of Groningen.

Leeruitkomsten

In a large project you will work with students from different schools (multi-disciplinary) to form a project team. You will eventually realise the value of working with people with different specialities, while designing and creating a new and useful service or product. Depending upon your background, you will select some of the minor workshops, or make a proposal to follow other relevant lectures and practicals available at that time.
