

## Course: Databases

credits: 2

<b>Course code</b>	ELVH16ADB	<b>Modes of delivery</b>	Assignment
<b>Name</b>	Databases		Lecture
<b>Study year</b>	2022-2023		Practical / Training
<b>ECTS credits</b>	2	<b>Assessments</b>	Databases - Assignment
<b>Language</b>	English		
<b>Coordinator</b>	M.S.R. van Noordennen		

### Learning outcomes

- The student understands the concepts and applications of databases.
- The student designs a relational database for storing and retrieving data using e.g. MySQL.
- The student creates a program that queries and updates data stored in a relational database.

### Content

Being able to store large amounts of data in a structured way is becoming more and more necessary. In this course you will learn about how to design and implement a database that is able to store the data of a specific application/system in a structured way. Next to making the database you will write a program in Java that is able to talk to this database. You will be able to add/change/remove and request data in the database. All these skills will be needed for a large assignment.

### Included in programme(s)

Electrical Engineering Major Sensor Technology

### School(s)

Institute of Engineering
