

Course: Professional Development Track

credits: 5

Course code	ESVM20PDT	Modes of delivery	Peer feedback
Name	Professional Development Track		Teaching method 1
Study year	2022-2023		Tutorial
ECTS credits	5	Assessments	Criterion Referenced Interview - Assignment
Language	English		Portfolio & Reflection Report - Assignment
Coordinator	W.H. Timmerman		

Learning outcomes

PLO 9 - The energy transition expert can independently and self-directly shape his own professional development and the development of others in a (learning) community.

Content

In the module Professional Development Track (PDT) the student will actively work on his own professional and personal development throughout the master programme. Starting with formulating his own learning goals and expectations, leading to a stepwise approach and action plan in order to develop the skills and competences that are relevant and important for the role of transition professional. What will be your future role, what do I need for that to fulfil that role, and how could you arrange that? Being critical and showing self-reflection capabilities are important ingredients of the PDT programme. In the first year of the master, you will work in small groups with a coach, providing and receiving feedback to the members of your small scale Community of Learners. You are stimulated to be pro-active to collect and organise the ingredients that you need for your development (student at the helm). The PDT module will be assessed in a Criterion Referenced Interview (CRI) session with your group, where you evaluate and reflect on your development process throughout your master programme.
