

Course: Physiotherapeutic Care: Lower Extremity and Spine theory

credits: 6

Course code	FYVP18FTOWT	Modes of delivery	Lecture
Name	Physiotherapeutic Care: Lower Extremity and Spine theory		Teaching method 1
Study year	2022-2023	Assessments	Pt-care: Lower Extremities: Theory -
ECTS credits	6		Computer, organised by STAD examinations
Language	Dutch, with parts in English		
Coordinator	H.A. Kranenburg		

Learning outcomes

1CD-FH. 1. The student can explain to one of his peers which essential questions must be asked to the client during a DTF screening.

1CD-FH. 20. The student can independently set up a physiotherapeutic assessment plan for a client with a simple musculoskeletal problem, based on casuistry descriptions.

1CD-FH. 162. The student can independently set up a physiotherapeutic treatment plan for a client with a simple musculoskeletal problem, based on casuistry descriptions.

1CD-FH. 257. The student can independently set up a care-related prevention plan for a client with a simple musculoskeletal problem, based on casuistry descriptions.

INT 1CD-E/FH 1: The student can justify the choices he/she makes in terms of physiotherapy using specialist literature written in English in consultation with a fellow student in a learning context.

Content

In daily practice of physiotherapy, musculoskeletal conditions of the lower extremity and lumbar spine are common. Think of complaints related to osteo-arthritis of the hip and/or knee. Back problems are common in certain work situations. The physical therapist is expected to be able to adequately examine and treat these patients. During this course the student must be able to demonstrate he has sufficient anatomical (including living anatomy), medical-biological, behavioral & communicative and physiotherapeutic knowledge. This knowledge must be applicable to patients with musculoskeletal conditions of the lower extremity and the lumbar spine.
