

Course: Clinical Medicine & Pharmacotherapy: Complex Care Issues

credits: 1

Course code	PHLM19KGFT8T	Modes of delivery	Practical / Training
Name	Clinical Medicine & Pharmacotherapy: Complex Care Issues		Tutorial
Study year	2022-2023	Assessments	Knowledge test - Computer, organised by STAD examinations
ECTS credits	1		
Language	Dutch, with parts in English		
Coordinator	J.A. van der Vliet		

Learning outcomes

Medical Expert:

- The student independently integrates effective, ethically sound, diagnostic skills in a complex patient problem into patient care.
- The student independently integrates effective, ethically sound, therapeutic skills in a complex patient problem in patient care.
- The student independently integrates effective, ethically sound, individual-centered preventive skills in a complex patient problem in patient care.

Content

During the course Clinical Medicine & Pharmacotherapy 8 "Complex Care Issues" in academic year 3 attention is paid to patient problems in all life phases from pre-conception to end of life. Healthy Ageing forms the theoretical framework by means of which various complex health issues are addressed. Central to this is also the question of how medical care can connect to these issues in an integrated manner. Students are thus stimulated to act as Master's-trained healthcare professionals, also in situations where standard interventions fail. All this after careful consideration and intercollegiate consultation regarding the medical-ethical and legal aspects that play a role in complex care problems.

Included in programme(s)

M Physician Assistant
