Language	Dutch, with parts in English		
Coordinator	A. Grootoonk		

Learning outcomes

The learning outcomes for the course PHLM21MP-CGI consist of the learning outcomes of the courses: PHLM19KGFT8-P, PHLM19GC8, PHLM19ONZ2-3, PHLM19SEPA5EM5 and PHLM21LDS.

Content

At the end of the Master's track Physician Assistant, the student demonstrates through a Criterion-Oriented Interview (COI) during this Master Aptitude Test that he has acquired those competencies that define a Master Physician Assistant and can integrate and critically consider them. A professional master's student can deal with complex matters in a broader context related to the field and analyze them from different theoretical, organizational, scientific, and managerial perspectives.

During the COI, the student demonstrates the acquired competencies and convinces why he is ready to start a career in medicine as a PA professional. During the Master Aptitude Test, reflection on the professional roles/competencies is requested explicitly at the level of the intended learning outcomes. Supported with the help of the STARRT methodology, addressing: situations, tasks, activities, results, reflection, and transfer, students bring all of the aspects into the limelight for the present examiners. Admission to the exam is only possible after meeting the entry requirements: the Specialist Case Study, the Master Thesis, the Position Paper Leadership, and the portfolio Learning in Practice.

Included in programme(s)

M Physician Assistant

School(s)

School of Health Care Studies
