Learning outcomes

- You acquire the necessary knowledge from the domain, seeks out relevant theories, analyses new technological developments and has a clear understanding of their problemsolving potential.
- Your attitude is based on respect for others (ethical awareness and intercultural skills).
- You manage his/her own development: displays selfknowledge (is aware of own strengths, weaknesses and motives), is capable of formulating learning needs, can reflect on and take responsibility for his/her own actions and manages the own learning process.
- You develop an investigative mindset: he/she is inquisitive, pro-active, open, critical, focused on gaining greater insight, willing to see things from different perspectives, willing to refrain from judgement and critically assess routines, can appreciate knowledge, and is eager to share insights with others.

Content

During this course you are going to work in a multidisciplinary team. Within this team each member has a specific role. In this course you'll develop yourself to fulfill this role to the best of your abilities. In order to do this, you'll specialize yourself based on research. You'll write a thorough method of approach and execute this to the best of your abilities. At the end you'll reflect on your progress and the process. The goal of this course is to develop your personal skill for a specific role within a multidisciplinary team (e.g. developer, designer, project manager).

During this course you will practice to:

- Conduct research into the specific role
- Write a methode of approach
- Define you added value within a multidisciplinary team
- Reflect on your progress and the process
