

Vak: Specialisation Photovoltaics (Northumbria)

credits: 30

Vakcode	RWVM23SPV	Werkvormen	Onderwijs
Naam	Specialisation Photovoltaics (Northumbria)	Toetsen	Spec.Photovoltaics - Overige toetsing
Studiejaar	2023-2024		
ECTS credits	30		
Taal	Engels		
Coördinator	C.B. Vogt		

Leeruitkomsten

The student will

- ♦ be able to discuss the properties of semiconductors which are important for PV applications.
- ♦ be able to describe the important PV devices.
- ♦ have a good understanding of semiconductors in equilibrium and non-equilibrium situations, homojunction and heterojunction solar cell devices and the differences between ideal and real devices.
- ♦ understand the need for purity and minimisation of crystal imperfections for making high performance devices.
- ♦ be able to describe and discuss the pros and cons of bulk crystal growth, epitaxial and low cost thin film deposition methods.
- ♦ at an introductory level outline how to make important solar cell devices.

Students will be able to:

- ♦ discuss the principles of operation and design of PV devices.
- ♦ discuss the main fabrication methods for advanced PV devices.
- ♦ describe and use the main characterisation methods used with semiconductor materials and PV devices.

The student will:

- Be able to complete basic design of both stand alone and grid connected systems
- Understand the requirements for construction, electrical connection and operation of systems
- Have experience of analysing system performance

The students will:

- Have an understanding of the economics of photovoltaic systems and their comparison with other electricity sources
- Be able to perform an environmental impact assessment or energy analysis for a PV system

Inhoud

Contents:

1. Cell and Module Technology
2. Advanced Cell Design
3. Photovoltaic System Technology
4. Economics, Policy and Environment

Opgenomen in opleiding(en)

European Master in Renewable Energy

School(s)

Instituut voor Engineering
