

Vak: Wind and Marine Energy

credits: 5

Vakcode	RWVM23WHE	Werkvormen	Onderwijs
Naam	Wind and Marine Energy	Toetsen	Assignment WHE - Presentatie
Studiejaar	2023-2024		Lab WHE - Opdracht
ECTS credits	5		Theory - Schriftelijk, organisatie
Taal	Engels		ToetsCentrum
Coördinator	W.F.J. Swart Ranshuysen		

Leeruitkomsten

After successful completion of this module, the student is able to:

- Perform a resource assessment on basis of wind speed measurements
- Interpret and analyze wind turbine performance measurements
- Make motivated wind turbine design choices
- Develop a mathematical/physical model to optimize a wind turbine design in terms of energy production, loads and costs
- Determine acoustic noise levels on a wind turbine
- Keep an orderly lab notebook according to the lab notebook guidelines
- Make a quantitative assessment of measurement and calculation errors and uncertainties
- Understand the-state-of-the-art and the potential of marine energy
- Report (in written form) the results of the experiments and analyses in a scientifically correct and clear form

Inhoud

In terms of scientific and technical contents this module will treat the following aspects of wind energy:

- Introduction into wind energy
 - The wind energy sector in a bird view: history, markets, scenario's and roadmaps,
 - Technological challenges and concepts
 - Off-shore wind energy versus on-shore wind energy
- Wind climate and resource assessment (measurements and modelling)
Rotor design (aerodynamics, aero-elasticity, acoustics, costs)
Introduction into Marine energy

Opgenomen in opleiding(en)

European Master in Renewable Energy

School(s)

Instituut voor Engineering
