Vak: Energy Transition — credits: 5

Vakcode	TBVB24ETR
Naam	Energy Transition
Studiejaar	2024-2025
ECTS credits	5
Taal	Engels
Coördinator	P.G. de Vey Mestdagh
Werkvormen	Onderwijs
Toetsen	Energy Innovation - Opdracht Scenarioplanning 1 - Opdracht

Leeruitkomsten

Students will select an innovation in the energy field and will perform a TIS assessment.
Students then determine what a company should do: continue developing the innovation or invest in the implementation process.

Students will analyze scenarios for possible future energy landscapes by applying the Oxford scenario planning model.

Inhoud

What will determine which innovations will be an important technology in the energy transition over the next years? One can look at the development of a technology as a process that takes place in a technological innovation system (TIS). The TIS includes all actors and institutions that are involved in the development, diffusion and utilization of a technology. For a technology to develop successfully the TIS should fulfil several functions, such as intrepreneurial activities, knowledge development, knowledge exchange, guidance of the search, market formation, resource mobilization and support from advocacy coalitions.

During this lecture series the theory of strategic scenario planning will be discussed. Working with the Oxford method of scenario planning, possible future energy landscapes will be investigated. An overview of scenarios published by Shell, International Energy Agency and other organizations will be analyzed.

Opgenomen in opleiding(en)

Exchange Energy & Society (autumn and spring)
Minor Energy & Society
